WEEKLY MORBIDITY REPORT
EXPLANATORY COMMENT

This report presents each week the annual admission rates per 1000 average strength for certain communicable diseases, venereal diseases, and all causes combined (diseases, injuries and poisonings). Source material is the weekly communicable disease reports submitted to BuMed by all shore stations within the continental limits of the United States.

Admission rates are calculated on an annual basis to facilitate comparison with corresponding annual, quarterly or monthly figures. Such annual rates of admission indicate the number of admissions per 1000 average strength which would occur over a year's time if the current week's experience continued for a year. They are obtained as follows:

$$\frac{\text{Number of Admissions During the Week} \times 52}{\text{Average Strength for the Week}} \times 1000$$

In order to make this report promptly available the figures contained herein are presented, in general, as reported. The symbol # indicates that current data are not available. In such cases, the most recent data are utilized.

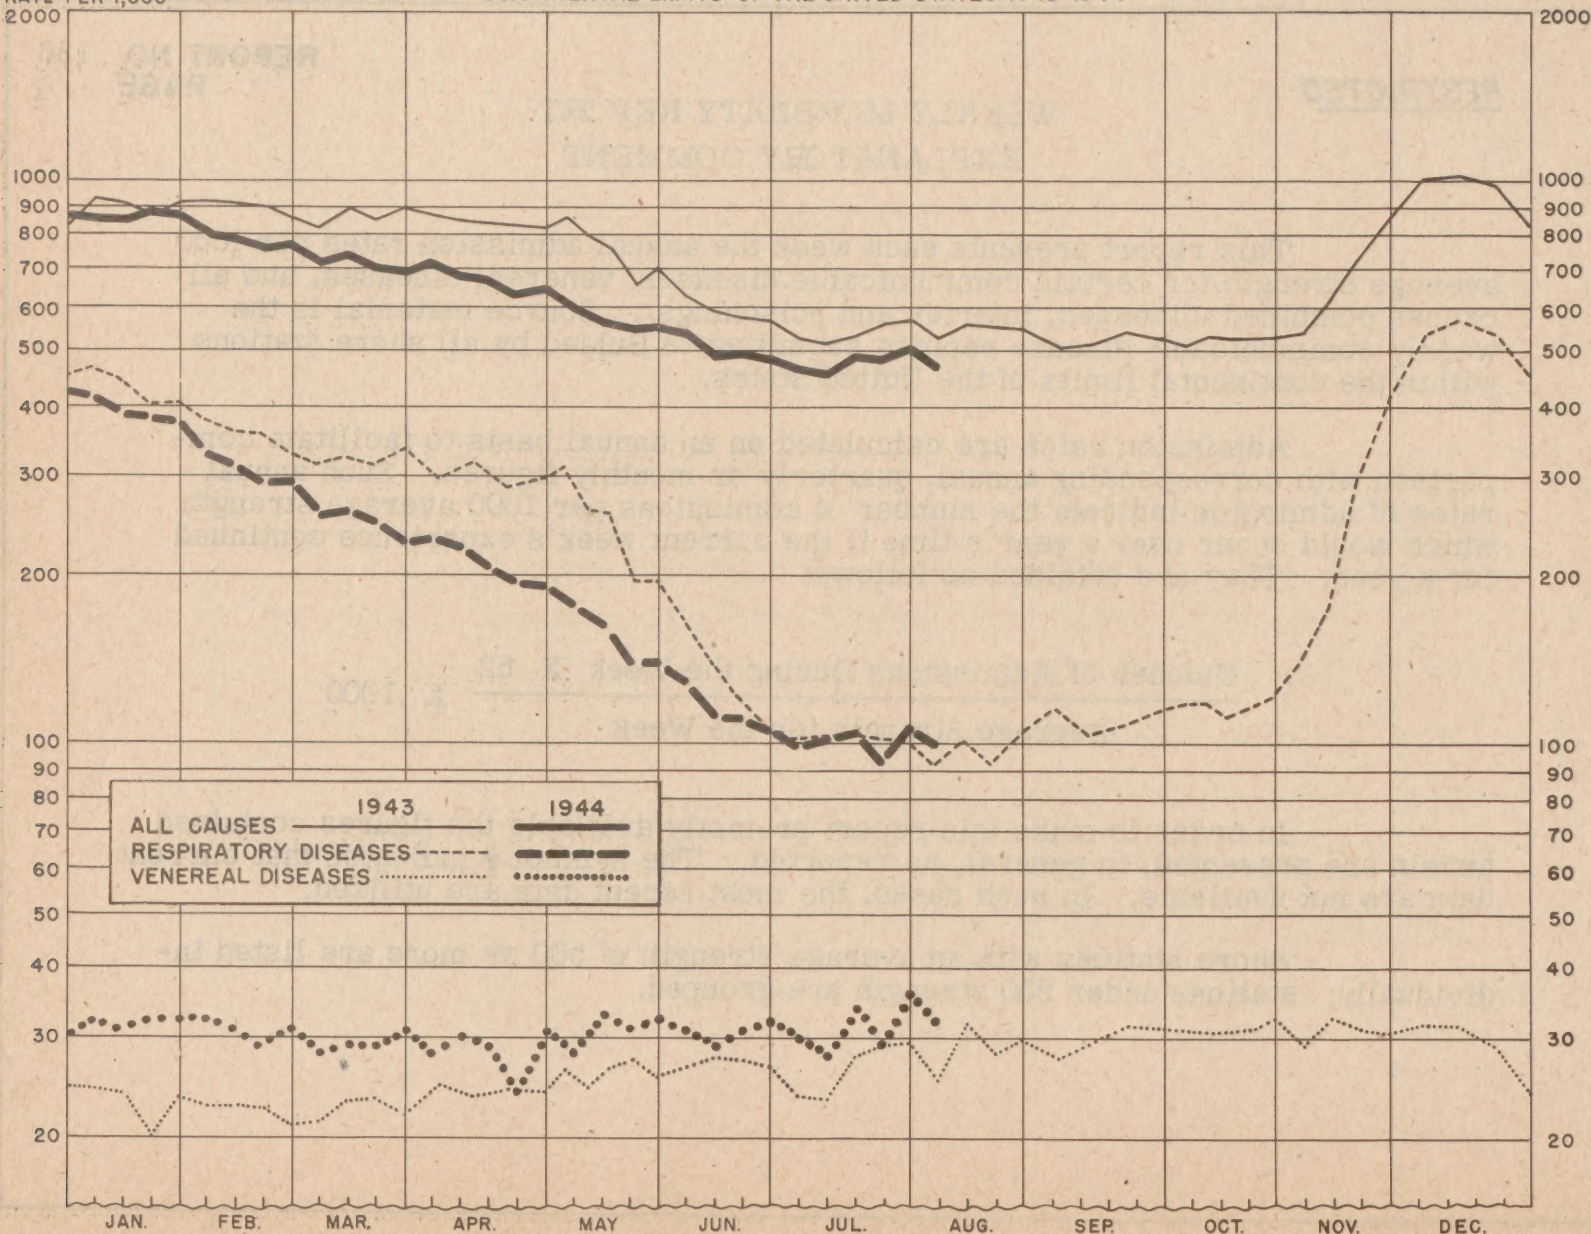

Shore stations with an average strength of 500 or more are listed individually; stations under 500 strength are grouped.

RESTRICTED

FIG
ANNUAL ADMISSION RATES PER 1,000 AVERAGE STRENGTH, BY WEEKS
FOR CERTAIN RESPIRATORY DISEASES*, VENEREAL DISEASES, & ALL CAUSES,
CONTINENTAL LIMITS OF THE UNITED STATES: 1943-1944

REPORT NO. 136
PAGE 2

RATE PER 1,000
2000

*INCLUDE: CATARRHAL FEVER, ACUTE; INFLUENZA;
PNEUMONIA-BRONCHO, LOBAR & ATYPICAL;
TONSILLITIS, ACUTE (1944 ONLY) PHARYNGITIS, ACUTE (1944 ONLY).

CURRENT TRENDS

Week Ending 5 Aug 1944

The admission rate for all causes fell again this week. The curve continues to stand below the 1943 curve for the corresponding period. The highest rate (1021) was reported for the Potomac and Severn River Commands, the lowest (353) for the 12th District.

The respiratory disease curve fell this week after a slight rise the previous week. The curve turned upward only in the 4th, 7th, and 12th Districts and in the Potomac and Severn River Commands. The highest rate (167) was reported for the 13th District, the lowest (70) for the 12th District.

After a rise in the previous week to the highest level of the year, the venereal disease curve this week returned sharply to 32. The 8th District reported the highest rate (47) and the 7th and 13th Districts the lowest rate (20). The 1944 curve continues to stand above the 1943 level.

Influenza and Catarrhal Fever. The rate for these infections dropped slightly this week, but the curve appears to have flattened out to establish a mid-summer level between 60 and 70. This compares favorably with the mid-summer level of both 1942 and 1943. The highest rate (84) was reported for the 9th District, the lowest (46) for the 12th District.

Pneumonia--Broncho and Lobar. For the sixth consecutive week the curve for these infections has stood at 1. This compares very favorably with a 1942 rate of 4.3 and a 1943 rate of 1.9 for the corresponding week. The highest rate (4) was reported for the 13th District. No cases were reported for the 6th and 7th Districts.

Pneumonia, Atypical. The curve for atypical pneumonia has stood at 2 for twelve consecutive weeks, including the present week. The 8th District reported the highest rate (7). The 4th District reported no cases.

Tonsillitis and Pharyngitis, Acute. After a slight rise in the previous week the rate for these infections dropped to 33 this week. The highest rate (96) was reported for the Potomac and Severn River Commands, the lowest (16) was reported for the 5th District.

CURRENT TRENDS -CONTD.

Rheumatic Fever, Acute. For the third consecutive week the rate for rheumatic fever has stood at 1 and it would appear that this is to be the approximate mid-summer low. Only in the 13th District was the rate high (7). In no other District was the rate over 2. Four Districts reported no cases.

Scarlet Fever. The scarlet fever curve continues to stand at 2. Though the curve stands below the 1943 curve, it stands considerably above the 1942 curve for the corresponding period. The 13th District with a rate of (30) was largely responsible for the failure to show a mid-summer low level. No other District reported a rate over 2. Five Districts and the Potomac and Severn River Commands reported no cases.

Cerebrospinal Fever, Meningococcic. The curve for this infection stands below the 1942 and the 1943 curves for the corresponding period. Only the 1st District reported any cases.

Malaria. The malaria rate was reported again at 2. The curve stands intermediate between the 1942 curve and the 1943 curve. The highest rate (6) was reported for the 1st District, the lowest rate (1) for the 6th, 7th, and 13th Districts and the Potomac and Severn River Commands.

Measles. After standing at 2 for the preceding six weeks the measles rate dropped this week to 1. No District reported a rate over 2. The 1st, 3rd, 4th, and 6th Districts and the Potomac and Severn River Commands reported no cases.

Poliomyelitis, Anterior, Acute. The 5th District reported one case of poliomyelitis, anterior, acute, for the week, the only case reported. The cumulative total of poliomyelitis cases reported from all Continental Stations Jan 1 through Aug 5 is 19.*

* Includes one case reported by dispatch from PhibTraBase, Little Creek, Va., Aug 3. Not reported on weekly Morbidity Report NavMed-172.
